## **7. Teaching Experience**

### **7.1 Teaching Philosophy**

Developed teaching philosophy based on the saying “*If the student has not learned, then the teacher has not taught*”. Firmly believe in student centered learning and outcome based education. Committed to continuous improvement of his teaching quality.

### **7.2 Teaching Strategy**

Teaching strategy involves motivating students from the very first class about the relevance of the course to the

programme outcomes and to their profession in the long run. Expose students to the bigger picture, links the course to a wider economic and societal context. Communicate to students of high expectation from them. Recognize the existence of wide variety of learning style among the students, and apply modern pedagogic principles to ensure effective teaching and learning. Get continuous feedback from the students as well as from stakeholders, and uses it as a tool for further improvement. Keeps on updating on modern methods of teaching and learning by attending relevant workshops/short courses regularly. Believe that pre-class preparation by the teacher is probably the single most important factor in quality teaching and learning, and take extensive preparation for course delivery.

### **7.3 Innovative Teaching**

Believe that course delivery in the form of just traditional lectures cannot be the most effective method of teaching and learning. Adopt active learning and cooperative learning techniques, in addition to lectures, in each course. Use Problem Based Learning (problem) in each course where students learn how to learn themselves and have the opportunity to practice their newly earned engineering skills.

Developed and taught an innovative project-based design courses where students are exposed comprehensively in a single course to micro- as well as macro-aspects of materials engineering practice, combining both technical and business issues. The course starts with the identification of a product and ends with the preparation of a project proposal suitable for submission to a financial institution for financing. This course was highly appreciated by international peers, as evidenced by the invitation from the International Union of Materials Research Societies (IUMRS) to present the experience from this course as an Invited Lecture in the IUMRS-ICEM 2008, International Conference on Electronic Materials 2008, Symposium S: Materials Education, 28 July - 01 August 2008, Sydney, Australia (*Invited Paper Title: Integration of Technical and Business Issues in a Single Course in a Materials Engineering Curriculum*).
